The RD192090100R Human S100B ELISA is a sandwich enzyme immunoassay for the quantitative measurement of human S100B in serum, heparin plasma and cerebrospinal fluid.

- The total assay time is less than 5 hours
- The kit measures S100B protein in serum, heparin plasma and cerebrospinal fluid
- Assay format is 96 wells
- Quality Controls are human serum based. Animal serum is used for Master Standard and for Dilution Buffer preparation
- Standard is native protein based
- Components of the kit are provided ready to use, concentrated or lyophilized

Clinical application

- Neural tissue damage
- Acute myocardial infarction
**Immunoassays**

**Test principle**
In the BioVendor Human S100B ELISA, standards, quality controls and samples are incubated in microplate wells pre-coated with polyclonal anti-cow S100B antibody. After 120 minutes incubation and washing, biotin labelled monoclonal anti-human S100B antibody is added to the wells and incubated for 60 minutes with captured S100B. After another washing, Streptavidin-HRP Conjugate is added. After 30 minutes incubation and the last washing step, the remaining conjugate is allowed to react with the Substrate Solution (TMB). The reaction is stopped by addition of acidic solution and absorbance of the resulting yellow product is measured. The absorbance is proportional to the concentration of S100B. A standard curve is constructed by plotting absorbance values against concentrations of Standards, and concentrations of unknown samples are determined using this standard curve.

**Summary of protocol**
- Reconstitute QCs and Master Standard and prepare set of Standards
- Dilute QCs, set of standards and samples 4x
- Add 100 μl Standards, QCs and samples
- Incubate at RT for 120 min/300 rpm
- Wash plate 3 times
- Add 100 μl Biotin Labelled Antibody solution
- Incubate at RT for 60 min/300 rpm
- Wash plate 5 times
- Add 100 μl Streptavidin-HRP Conjugate
- Incubate at RT for 30 min/300 rpm
- Wash plate 5 times
- Add 100 μl Substrate Solution
- Incubate at RT for 15 min
- Add 100 μl Stop Solution
- Read absorbance and calculate results
